Court Square Group

A Quintessential Technology Partner for Life Science Companies

Court Square Group is an industry-leading managed services company offering the Audit Ready Compliant Cloud™ (ARCC) infrastructure for research and development (R&D) groups, CROs, and sponsors. With a market presence spanning 27 years and counting, the company's core competencies comprise managed hosting, disaster recovery, and long-term archiving through its FDA 21 CFR Part 11 certified ARCC infrastructure. "We leverage the experience acquired from enterprise collaborations into helping early-stage startups flourish in the industry. Our goal is to understand each company's specific requirements and determine the most effective IT solutions to fit their budget and resource capacity," says Keith Parent, CEO of Court Square Group.

Additionally, Court Square Group helps clients unlock and maximize the value of their content with its ARCC-hosted, compliant, and regulated content and document management solution, RegDocs365. The solution provides real-time document visibility while enabling innovative solutions by integrating commercial grade products and embedding 21 CFR Part 11 compliance within the overall solution.

RegDocs365 characterizes, unifies, and centralizes data enabling clients to create, collaborate, protect, and publish content in multi-sponsor environments.

What makes Court Square Group unique is its focus on understanding clients' requirements before introducing them to the solution they'd need. The company looks at clients' IT process, roadmap, and compliance gaps, to put them on the right path toward digital transformation. Court Square Group identifies where a client is positioned in its developmental journey and defines a roadmap for the most appropriate solutions for the clients. By doing so, the company prevents businesses from overpaying upfront for a solution. Instead, it helps them scale enterprise-level solutions as they move forward with operations, from pre-clinical, through clinical and regulatory, to manufacturing. "An early-stage company standing at phase one would not need many sophisticated tools to maintain their operations compared to the ones in phase two or three. To that end, the approach enables clients to have full protection, and be always audit ready, without any budgetary constraint," mentions Parent.

Court Square Group's unmatched support towards startups and openness to collaboration with partners is reflected in one of its recent collaborations. A startup biotech company manufacturing cell, gene, and immunological therapies for cancer lacked the internal resources required

to organize work and documentation, manage workflows, and project progress. They needed efficient solutions that were compliant with all regulatory requirements to address the challenges. To help the client, Court Square Group partnered with The Windshire Group, a global chemistry, manufacturing, and controls (CMC) consultancy. Through the partnership, the company provided a robust IT infrastructure and the RegDocs365 solution that improved the client's processing, manufacturing, quality, IT integration, and supply chain operations. The solution also helped the client's teams organize work and communicate across continents easily.

“ We are blending industry-leading metrics, processes, and workflows with our platform to develop a way to help startups get off the ground and move forward quickly

Keith Parent

Having scripted several such success stories, Court Square Group is galloping ahead to unlock further the potential of technologies in adding value to its client base. As IT experts, the next steppingstone for the company is to scale and repurpose AI-based technologies to bring out the value available in clients' content repositories. It also aims to use public cloud environments to host qualified, validated, and large-scale applications. "For instance, we are collaborating with one of the top CROs to put together a concept of providing compliance in a box for startups belonging specifically to the gene therapy space. We are blending industry-leading metrics, processes, and workflows with our platform to develop a way to help startups get off the ground and move forward quickly," says Parent.

Evidently, Court Square Group's end-to-end knowledge of the life sciences and drug development life cycles, combined with their IT and compliance expertise, positions it to be a quintessential partner for their clients. [LS](#)
